No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The hOB-BP2h nucleic acids a useful as probes or amplification primers in the detection, quantification or isolation of gene sequences or transcripts, for recombinant expression of hOB-BP2h polypeptides, as immunogens in the preparation and screening of antibodies, and in sense or antisense suppression of one or more hOB-BP2h genes or nucleic acids, host cell or tissue in vivo or in vitro. Antigenic epitope-bearing peptides and polypeptides are useful for raising or screening antibodies that specifically binds to the hOB-BP2h polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is a human obesity protein binding protein-2 homologue (hOB-Bp2h) of the invention. The hOB-Bp2h nucleic acids and polypeptides may be used for the manufacture of a medicament for the treatment of obesity and/or obesity-related disorders. The hOB-Bp2h nucleic acids are

                                                                                      Qγ
                                                                                                                                                                                                                                             CC represent potential markers for screening, diagnosis, prognosis, CC represent potential markers for screening, diagnosis, prognosis, CC drollow-up assays, and imaging methods. (I) is useful as a target for CC drollow-up assays, and imaging methods. (I) is useful as a target for CC drollow-up assays, and inflammatory diseases such as allergic rhinitis, CC osteoarthritis, Crohn's disease, psoriasis, rheumatoid arthritis, CC conjunctivitis, etc. (I) is also useful for monitoring the course of CC conjunctivitis, etc. (I) is also useful for monitoring the course of CC modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid CC molecules (II) encoding (I) are useful in diagnosis and/or prognosis CC methods, and to detect the presence and/or amount of SIGLEC-BMS creening genomic CC library to isolate a genomic clone of SIGLEC gene. SIGLEC-BMS gene copy CC library to isolate a genomic clone of SIGLEC-BMS gene substituted with SIGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also cused to detect, sort or isolate cells expressing SIGLEC-BMS proteins CC used to detect, sort or isolate cells expressing SIGLEC-BMS proteins cand in diagnostic imaging technology. AAU87074-AAU87089 represent CC human SIGLEC amino acid sequences of the invention.

asthma, and inflammatory diseases such as allergic rhinitis,

Conjunctivitis, crohn's disease, psoriasis, rheumatoid arthritis,

Cc conjunctivitis, etc. (I) is also useful for monitoring the course of

CC disease or disorders, and for identifying agents that bind with and/or

CC modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid

CC molecules (II) encoding (I) are useful in diagnosis and/or prognosis

CC methods, and to detect the presence and/or amount of SIGLEC-BMS

CC nucleotide sequences and/or SIGLEC-BMS proteins in a biological sample.

CC (II) are useful as nucleic acid probes are useful for screening genomic

CC ilbrary to isolate a genomic clone of SIGLEC-BMS gene copy

CC number is determined for detecting diseases or disorders associated with

CS SIGLEC-BMS transcripts or proteins. The SIGLEC-BMS proteins

CC used to detect, sort or isolate cells expressing SIGLEC-BMS proteins

CC and in diagnostic imaging technology. AAU87074-AAU87089 represent

New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders -

Claim 12; Fig 93; 530pp; English.

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ34338, and AAX41685 to AAX41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating blological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ferrara

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. CC The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of CC expression of a PRO polypeptide in a test sample of cells from the animal CC and a control sample of normal cells, whereby a higher level of CC expression in the test sample indicates the presence of a tumour in the CC mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats CC and rabbits but are preferably human. The polypeptides can be used to CC stimulate tumour necrosis factor (TNF) alpha release from human blood, CC when contacted with it. A specific polypeptide can be used to stimulate tumour or differentiation of chondrocyte cells. The PRO CC proteins can be used to determine the presence of tumours and also CC susceptibility to tumour development, particularly adrenal, lung, colon, CC breast, prostate, rectal, cervical, or liver tumours, in mammalian CC subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               140
   The invention discloses human nucleic acids encoding secreted and transmembrane (PRO) polypeptides. Also disclosed is an antibody that specifically binds to the PRO polypeptide, a method for stimulating trelease of tumour necrosis factor alpha (TNF-alpha) from human blood contacting the blood a PRO polypeptide, a method for stimulating the
                                                                                             Claim
                                                                                                                      New secreted and transmembrane PRO polypeptides and nucleic useful in gene therapy, in chromosome and gene mapping, as c markers, in tissue typing, and in chromosome identification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proliferation or differentiation of chondrocyte cells by contacting the cells with a PRO polypeptide, a method for detecting the presence of a tumour in a mammal and an oligonucleotide probe derived from any of the PRO nucleotide sequences. The nucleotide sequences are useful as probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant techniques and in gene therapy (e.g. for replacement of defective gene). The PRO polypeptides are useful as molecular weight markers for protein electrophoresis purposes, for chromosome identification, as chromosome markers, as therapeutic agents, for stimulating the release of TMF-alpha from human blood, for stimulating the presence of a tumour. The PRO polypeptides and nucleic acids may also be used diagnostically for tissue typing. The sequences presented in ABU67406-ABU67710 are the PRO polypeptides of the invention.

CC polypeptides are secreted and transmembrane proteins. The PRO cc polypeptides are secreted and transmembrane proteins. The PRO cc polypeptides are useful for detecting other PRO polypeptides, for clinking bloactive molecules to cells expressing PRO polypeptides, core for modulating biological activities of cells expressing PRO cc for modulating biological activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The polypeptides, and for for identifying agonists or antagonists. The cc polypeptides are useful for creating immune disorders, diabetel or antibody, and causes cc apoptosis or death of the cell. The PRO polypeptides are useful for treating immune disorders, diabetes or hyper- or hypo-insulinaemia, c cardiac insufficiency, nervous system disorders, kidney disorders, come and cartilage disorders or arthritis, tumours, and wound healing. The polynucleotide sequences encoding PRO polypeptides are useful as thybridisation probes, in chromosome and que mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy.

ABUG1071-ABUG1164 represent the human PRO polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ferrara

                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are neefful for detecting other PRO polypeptides, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating cancer, kidney diseases, bone, cartilage disorders and immune deficiencies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB;

A46512
CD22 homolog/B lymphocyte-restricted adhesion molecule - mouse
C;Species: Mus musculus (house mouse)
C;Date: 18-Jun-1993 #sequence_revision 18-Nov-1994 #text_change 11-Apr-1995
C;Accession: A46512
R;Torres, R.M.; Law, C.L.; Santos-Argumedo, L.; Kirkham, P.A.; Grabstein, K.; Parkhouse, J. Immunol. 149, 2641-2649, 1992
A;Title: Identification and characterization of the murine homologue of CD22, a B lymphod A;Reference number: A46512; MUID:93017867; PMID:1401903
A;Accession: A46512; MUID:93017867; PMID:1401903
A;Accession: A46512
A;Status: preliminary; not compared with conceptual translation
A;Residues: 1-868 <TOR>
A;Experimental source: B cell lymphoma 38C13
A;Note: sequence extracted from NCBI backbone (NCBIP:116156)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (eosinophils, monocytes and a natural killer cell subpopulation). Isoform 5 is found to be the most abundant isoform. Found in lymph node, lung, ovary and appendix. Isoform 1 is found at high levels and isoform 2 at lower levels in bone marrow, spleen and spinal chord. Isoform 2 is also found in brain. Isoform 4 is specifically found in natural killer cells.

DOMAIN: Contains an intracytoplasmic motif referred as immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in downmodulation of cellular functions as the termination of the immune response. The phosphorylated ITIM motif binds to the SH2 domain of PTPN6/SHP-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PTM: Tyrosine-phosphorylated.

SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. SIGLEC (SIALIC ACID BINDING IG-LIKE LECTIN) SUBFAMILY.

SIMILARITY: Contains 1 immunoglobulin-like V-type domain.

SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Name=2; Synonyms=Short, Sv1;

Also found in brain microglia. DOMAN: Contains an intracytoplasmic motif referred as immunoreceptor tyrosine-based inhibitor motif (ITIM). This is involved in downmodulation of cellular functions as the termination of the immune response.

-I DOMAIN: Contains an intracytoplasmic motif referred as immunoreceptor tyrosine-based inhibitor motif (ITIM). This mot is involved in downmodulation of cellular functions as the termination of the immune response.
-I SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. SIGLEC (SIALIC ACID BLUDING IG-LIKE LECTIN) SUBFAMILY.
-I SIMILARITY: Contains 2 immunoglobulin-like V-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TRANSMEN
